Managing a Successful Dental Practice

***Developing a business
worth smiling about***

Designed for dentists who own their practice, this nine-day program delivered over 3 months will develop the strategic and operational skills and abilities to ensure an efficient patient-centered business. Based on best practices and key measurements from the industry, these models and skills will answer the business questions you have so that you can focus on dentistry.

In addition – each topic has built-in exercises to help you work on your own practice, from identifying your key performance issues to developing a sound assessment of the current health and future prospects for your practice. There is also peer discussion to identify shared problems and to identify a range of solutions. Guest Speakers will deliver seminars on managing wealth, investment strategies, etc

Developed and presented in partnership with the Sauder School of Business, the Faculty of Dentistry, and the BCDA this innovative new program is delivered by recognized industry leaders and leading business researchers.

Open to Dentists and their staff

Dec 1–3, 2012

January 19–21, 2012 *TBC*

February 24–26, 2012

Price TBD*

September 2011

Dear Life Long Learner:

I am very pleased to present the new Fall 2011 Catalogue of Courses sponsored by Continuing Dental Education at The University of British Columbia. I hope that by providing you with this detailed information, you will be able to take advantage of some of the excellent educational opportunities available.

As you will discover we have an exciting roster of courses again this fall, in both Vancouver and India. The India trip has been graciously arranged by Dr. Harinder Dhanju, and CDE is very excited to be part of this initiative. We plan to travel to New Delhi, Bangalore and Mumbai, offering CE at local universities. Our goal is to introduce Indian Dentists to UBC CDE, and of course our excellent Faculty of Dentistry.

In January along with the Sauder School of Business, CDE is launching a new 3 session course **Managing a Successful Dental Practice**. Each session will be a 3 day course delving into the topics of Strategic Leadership, Leading People and Managing Transitions.

Check often on our website www.dentistry.ubc.ca for updates and confirmation of dates of this exciting new course.

Also be sure to register for our **Adventure and Learn Hawaii 2012** in Maui, January 30 – February 3rd 2012. After a fantastic and successful Hawaiian experience in 2011, CDE is pleased to take Adventure and Learn back to Maui. Join Drs. Larjava and Lowe as they present on **Periodontics and Aesthetics**, and Dr. Shuler as he presents on **Oral Cancer: Why haven't the clinical outcomes improved?**, at the Fairmont Kea Lani Resort. Registration for this exciting learning opportunity is available on-line at www.dentistry.ubc.ca/cde. Special airfare and hotel reservations have been arranged for course members that are not available to the general public. Please contact Jane Patrick at North South Travel at 604-717-1751.

CDE has launched a Facebook Page, UBC Continuing Dental Education. Become a fan at Facebook.com!

Lastly, I would like to thank our sponsors for their ongoing support of our program, as well as those of you who continue to register for our courses. I hope that you are enjoying the summer, and I am looking forward to seeing you this fall!

With kind regards,

Sylvia Stephens, Director

Continuing Dental Education

P.S. Don't forget to bring a water bottle to our courses!

Please display this Catalogue in your office so that all members of your team have access to these continuing education opportunities.

GENERAL INFORMATION

TO REGISTER:

ON-LINE: Go to WWW.DENTISTRY.UBC.CA/CDE and click "To Register for a Course"

BY PHONE: Local calls: 604.822.6156
Toll free 1.877.328.7744 (Canada & US)

CREDITS

Continuing education credits for Dentists and Certified Dental Assistants are automatically forwarded to the College of Dental Surgeons of B.C.; and for Dental Technicians to the College of Dental Technicians of B.C. Registered Dental Hygienists are required to maintain their own records for submission; however, we include letters of attendance in the registration packages that are picked up at the registration desk on the day of each course. Upon request, we can provide records of attendance at UBC sponsored courses.

BREAKS

For full day courses, beverages and light snacks are available upon arrival, and morning refreshment breaks and lunches are included. Refreshments and a light snack are provided for evening lectures.

PARKING

Parking at UBC is available in the Health Sciences Visitors Parkade: weekend and evening (after 5 pm) flat rate \$6.00; or in B Lot: everyday flat rate \$6.00 (Mastercard and Visa accepted). Parkade parking during weekdays is available at \$1.75 per half hour up to a maximum of \$14.00 per day. Parking at the H.R. MacMillan Space Centre is pay parking.

REFUND POLICY

Limited Enrolment Courses require a minimum of 15 days notice for a full refund less \$50.00 administration fee. Cancellations made between 7 to 14 days prior to the first day of the program will receive a 50% refund. No refund will be granted for cancellations made less than 7 days prior to the first day of the program.

For unlimited enrolment courses, registrants withdrawing 72 hours prior to the course date will be refunded less a \$50.00 administration fee. No refund will be granted for cancellations made less than 72 hours prior to the course date.

DISCLAIMER

Dental education institutions have an obligation to disseminate new knowledge related to dental practice. Some presentations may include controversial materials or commercial references. Sponsorship of a continuing education course by The University of British Columbia does not imply endorsement of a particular philosophy, procedure or product by The University of British Columbia.

ADA CERP

UBC Continuing Dental Education is an ADA CERP Recognized Provider.

ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.

Concerns or complaints about a CE provider may be directed to the provider or to ADA CERP at www.ada.org/goto/cerp.

Saturday September 17th, 2011

DE 9345

Cone Beam CT (CBCT) Program for Dental Assistants and Hygienists

LIMITED ENROLMENT

COURSE OUTLINE:

Cone Beam CT (CBCT) is one of the fastest growing technologies in dentistry, with approximately 100% growth per year since 2005. The applications of this technology span every dental discipline and specific functions in implant planning, TMJ, airway analysis and pathology. While there are courses on CBCT for dentists, there are very few available for dental assistants and hygienists. Yet, most offices rely upon the staff to be involved with the various aspects of CBCT imaging of patients. This program is designed to fulfill a need for continuing education on the topic of CBCT imaging, and includes practical information for the utilization of CBCT. Key topics include the fundamental technology behind CBCT, operational parameters, patient management and positioning strategies, data management and reformatting, radiation hygiene and dosimetry.

The program includes a 2 hour workshop for hands on training on 3-D visualization. Participants will be provided 3-D viewing software and practice cases to “walk through” with guidance from the presenter.

AGENDA:

- 1. What is Cone Beam Computed Tomography?**
Fundamentals of CBCT
Operational Parameters
- 2. Patient Management and Positioning Strategies**
Fields of view
Techniques to reduce motion artefacts
- 3. Clinical Examples of Utilization**
- 4. Radiation Hygiene and Dosimetry**
- 5. Hands On Workshop (Participants will be required to carry a laptop, please ensure it is fully charged).**

LAPTOP REQUIREMENT: Participants will be required to carry a laptop for this course (no Mac's; graphics card with minimum of 3GB of RAM and a discrete video card with 256MB is required).

Dr. James Mah, DDS, MSc, DMSc, is an Associate Clinical Professor at the University of Southern California and the University of Nevada, Las Vegas. At USC he is the Director of Redmond Imaging Center and the Director of the Craniofacial Virtual Reality Laboratory. Dr. Mah obtained his Bachelor of Science, Doctorate of Dental Surgery, Master of Science degrees and his Certificate of Specialization in Orthodontics from the University of Alberta, Canada. He graduated from Harvard Medical School with a Doctorate of Medical Science degree and completed a Post-Doctoral Fellowship in the Department of Orthopaedics at Children's Hospital, Boston. His current research has been focused on creating virtual 3-dimensional craniofacial patients upon which diagnosis, treatment planning and simulations can be performed.

Dr. Robert Langlais, BA, DDS, MS, FRCD(C), is a Professor at the University of Texas Health Science Center at San Antonio, and the Director of the International Association of Dento-Maxillo-Facial Radiology (IADMFR). His current areas of interest are Radiology and Oral Medicine. Dr. Langlais has presented over 500 courses and lectures in Oral and Maxillofacial Radiology and other topics in all continents of the world except Antarctica, and has over 120 scientific papers and has written eleven textbooks first edition. Currently most of his presentations are on the subject of cone beam CT. Dr. Langlais is also the National Consultant in dental radiology to the Surgeon General of the United States Air Force and holds the civilian military equivalent rank of Brigadier General. He also holds the rank of Commander (ret.) in the Canadian Navy Reserve.

TUITION:	Before Sept 7	After Sept 7
Hygienists and CDAs:	\$195	\$225
LOCATION: Lecture Hall #6, Instructional Resources Centre (IRC)		
TIMES:	Registration:	7:30 am
	Course commences:	8:00 am
8 Hours of instruction		

**Saturday September 17th and
Sunday September 18th, 2011**

**Cone Beam CT Certification Program
for Dentistry
2 Day program**

Dr. James Mah, Dr. Robert Langlais

**FULL
PLEASE CALL
PROGRAM OFFICE AT
604.822.2627
TO BE PUT ON WAIT-LIST
FOR A FUTURE COURSE**

COURSE OUTLINE:

With the introduction of Cone Beam CT (CBCT) in dentistry comes the responsibility for adequate training and education on its utilization to both maximize its diagnostic and therapeutic potential while considering the risk/benefit of ionizing radiation to patients.

This course is aimed at preparing attendees for CBCT utilization and/or ownership. It will provide fundamentals of diagnostic imaging as well as clinical guidelines. A workshop component allows dentists to obtain "hands on" training with visualization software and become competent in common applications such as measurement of bone height and width for implant planning, examination of the temporomandibular joints and visualization of impacted teeth. The course culminates with a multiple choice examination.

Participants will be required to carry a laptop for this course (no Mac's; graphics card with minimum of 3GB of RAM and a discrete video card with 256MB is required).

1. Fundamentals of Imaging, Radiation Dosimetry, Clinical Guidelines

Topics include radiologic physics, interaction of x-rays and biologic matter, evolution of dental imaging, measures of specificity and sensitivity, radiation dosimetry, risk benefit, fundamentals of CBCT, differences between devices, device settings, operational parameters, software for visualization, craniofacial anatomy, clinical applications and strategies for imaging and radiologic interpretation and reporting.

2. Workshop involving image acquisition AND interpretation

Selected cases, such as implant planning, temporomandibular joint examination, airway analysis, and impacted teeth will be provided to demonstrate application of the above fundamentals with emphasis on visualization strategies and radiologic interpretation. Course attendees will be provided sample cases to demonstrate their understanding and proficiency. The image results and radiologic interpretation will be graded to document competency. Participants will be required to carry a laptop (no Mac's).

3. Examination

Following the course and workshop, a multiple choice examination is administered. A score of 75% or higher is required to satisfactorily complete the certification.

4. Educational Goals

At the conclusion of this course attendees will:

- Understand the basic fundamentals of cone-beam CT technology, principles of operation, need for multi-dimensional imaging and comparisons to conventional imaging devices.

- Understand the effect of ionizing radiation on biologic matter, radiation dosimetry, radiation hygiene and strategies to reduce effective absorbed dose to the patient.
- Become familiar with radiographic craniofacial anatomy and variations.
- Understand clinical indications for CBCT and be able to prescribe appropriate operational parameters for imaging; be able to utilize computer software to visualize CBCT images and select appropriate methods of visualization.
- Be able to provide a basic interpretation and report of CBCT images.
- Be prepared for installation and ownership of a cone-beam CT device.

Dr. James Mah, DDS, MSc, DMSc, is an Associate Clinical Professor at the University of Southern California and the University of Nevada, Las Vegas. At USC he is the Director of Redmond Imaging Center and the Director of the Craniofacial Virtual Reality Laboratory. Dr. James Mah obtained his Bachelor of Science, Doctorate of Dental Surgery, Master of Science degrees and his Certificate of Specialization in Orthodontics from the University of Alberta, Canada. He graduated from Harvard Medical School with a Doctorate of Medical Science degree and completed a Post-Doctoral Fellowship in the Department of Orthopaedics at Children's Hospital, Boston. His current research focuses on creating virtual 3-dimensional craniofacial patients upon which diagnosis, treatment planning and simulations can be performed.

Dr. Robert Langlais, BA, DDS, MS, FRCD(C), is a Professor at the University Of Texas Health Science Center at San Antonio, and the Director of the International Association of Dento-Maxillo-Facial Radiology (IADMFR). His current areas of interest are Radiology and Oral Medicine. Dr. Langlais has presented over 500 courses and lectures in Oral and Maxillofacial Radiology and other topics on all continents of the world except Antarctica, and has over 120 scientific papers and has written eleven textbooks first edition. Currently most of his presentations are on the subject of cone beam CT. Dr. Langlais is also the National Consultant in dental radiology to the Surgeon General of the United States Air Force and holds the civilian military equivalent rank of Brigadier General. He also holds the rank of Commander (ret.) in the Canadian Navy Reserve.

DE 9138

Local Anaesthesia for Dental Hygienists

This is a three and a half day course, designed to teach basic and current concepts of local anaesthesia, and administration of local anaesthetic agents. This course is comprised of two sessions. As participants practice on each other, you must be able to receive local anaesthesia or you must provide a stand-in for your partner.

- **SESSION I** – (two full days, October 1st and 2nd) consists of didactic information, instruction, and application of clinical techniques.
- **SESSION II** – (October 28th evening and October 29th full day) consists of written and clinical evaluations.

NOTE: During the interval between Session I and Session II, participants must practice the techniques under the personal observation of their employing dentist.

If you are from out of province, it is your responsibility to make arrangements to complete your practicum in British Columbia or in a jurisdiction where dental hygienists may legally administer local anaesthetic agents.

COURSE OBJECTIVES:

Upon completion of this course, participants will be able to:

1. Describe head and neck anatomy related to the administration of local anaesthetic agents.
2. Describe principles of pharmacology related to local anaesthetic agents and adrenergic drugs.
3. Demonstrate the various techniques involved in the administration of local anaesthetic agents.
4. Explain patient evaluation, complications and office emergencies as related to local anaesthesia.

NOTE: *Handbook of Local Anaesthesia (5th Edition)*, by Dr. Stanley Malamed is the textbook for the course and should be reviewed prior to the course. A self aspirating syringe is also provided to each participant on the first day of the course.

Participants must successfully complete the program prior to being eligible for a change in registration status by the College of Dental Hygienists of British Columbia to administer local anaesthetic agents.

Saturday October 1, 2011

DE 9346

Occlusion and Function

Dr. John Nasedkin

COURSE DESCRIPTION:

Occlusion is the key to most aspects of successful restorative, implant and aesthetic dentistry. The long-term function of both adhesive and cemented restorations depends on chewing and para-functional forces that do not overcome bonds and material strengths. Concepts of joint-based occlusion for incorporation into routine clinical and diagnostic practice will be highlighted in this one-day program.

COURSE TOPICS:

1. Occlusion/tm joint screening leading to treatment differentiation.
2. TM Joint clicking – a joint-based determination of which patients to treat and how.
3. Identify the critical canine and anterior guidance patterns which support bonded porcelain and decrease muscle tension.
4. Outline a sequence for restoring canine guidance and an occlusal adjustment technique for developing an optimal chewing system engram.
5. Occlusal appliances: Mastering the stabilization splint for effective jaw reprogramming.
6. Introduction to bite raising and jaw repositioning determinations and techniques.
7. How occlusion complements smile design and delivery.

In addition to this program, participants are encouraged to register for Practical Clinical Occlusion – A Clinical Participation Course. This program involves seven half-day sessions as a clinical practical series for which patients are required. You will master occlusion and tm joint management including oral appliances and bite refinement. A complete protocol for diagnostic assessment and an informed consent letter are essential achievements. The emphasis is on patient experience to provide enhanced treatment planning and execution.

John Nasedkin, D.D.S., F.R.C.D.(C), F.A.D.M., is a consultant prosthodontist in Vancouver Canada, who has taught occlusion/tmj and aesthetics on every continent. He is a past-President of the American Equilibration Society and a member of the Pacific Coast Society of Prosthodontists, the American Academy of Cosmetic Dentistry and many prestigious organizations. He is the co-editor of the book, "Occlusion: The State of the Art". He mentors the first aesthetic study club in Canada (27 years) and is a Clinical Assistant Professor in Graduate Occlusion and Prosthodontics at UBC.

TUITION:	Until Sept 17	After Sept 17
Dentists:	\$ 260	\$ 280
Dental Hygienists:	\$ 150	\$ 165
Dental Technicians:	\$ 150	\$ 165
CDAs:	\$ 135	\$ 150

Continental breakfast, luncheon and all course handouts included.

TIMES: Registration: 8:30 am
Course commences: 9:00 am

**LOCATION: Lecture Hall #6, Instructional Resources Centre (IRC),
 University of British Columbia**
6 hours of instruction

Saturday October 22, 2011

DE 9347

The New Perio Medicine Protocol – Consistently Better Patient Outcomes

Dr. Timothy Donley

COURSE DESCRIPTION:

Significant numbers of patients are walking into our offices every day with legitimate periodontal treatment needs. There are now more than ever compelling reasons to address these needs, as we have the technologies and abilities to problem solve better than ever before.

The success of the periodontal portion of your practice is going to depend on your ability to do three things:

1. Identify patients in need of care.
2. Motivate them to follow through.
3. Use a therapeutic approach that gives your patients the maximum chance to achieve and then maintain a preferred level of oral health.

Attendees consistently rate this course as “excellent.”

This course will show you how to do all three. You will learn what we can now say for sure about links between perio disease and heart disease, diabetes, pre-term low birth weight, arthritis, obesity, etc. Then learn how to incorporate these findings into a risk based approach to periodontal diagnosis and treatment that will work in your practice. You will leave with a clear understanding of what to use and when to use it.

SEMINAR AGENDA:

Advantages of a risk-based approach

- Determine tx aggressiveness
- Motivate patients

Perio and systemic health

- The latest on the links (diabetes, cardio, obesity, stress, arthritis, etc.)

Priority patients

- Which patients we should be treating differently
- How to collect the necessary info

The new message of dentistry

- What to tell patients
- What to give patients
- Marketing materials you can use in the office

New biofilm based treatment philosophy

- Which debridement method works best
- The new goal of treatment

Adjuncts: what to use/when to use them

- Local antibiotic therapy
- Host modulation therapy
- Lasers for debridement

Standard of care treatment protocol

- Preferred recall approach
- When to treat, when to refer

Oral hygiene

- Finally, a sensible approach

Where to go from here

- What to do starting tomorrow

Timothy Donley, DDS, MSD, is currently in the private practice of Periodontics and Implantology in Bowling Green, KY. After graduating from the University of Notre Dame, Georgetown University School of Dentistry and completing a general practice residency, he practiced general dentistry. He then returned to Indiana University where he received his Masters Degree in Periodontics. Dr. Donley is the former editor of the Journal of the Kentucky Dental Association and is an adjunct professor of Periodontics at Western Kentucky University. He is a lecturer with the ADA Seminar Series. Dentistry Today recently listed him among its Leaders in Continuing Education. He lectures and publishes frequently on topics of interest to clinical dentists and hygienists.

TUITION:	Until Sept 30	After Oct 1
Dentists:	\$ 260	\$ 280
Dental Hygienists:	\$ 150	\$ 165
Dental Technicians:	\$ 150	\$ 165
CDAs:	\$ 135	\$ 150

Continental breakfast, luncheon and all course handouts included.

Bread and Butter Dentistry

Dr. Mark Duncan

COURSE DESCRIPTION:

During this course we will explore several basic and fundamental perspectives regarding both the dental opportunities and the psychologies of our patients. It is apparent that in all of our various experiences in dental education, we are given exceptional foundations from which to expand our thinking and grow our skills. Most dental programs do an excellent job of creating solid and in many, exceptional hand skills. However, with the rate at which our profession is changing, it is impossible to not aggressively pursue growth and knowledge if we are to stay current.

Between advances in materials and technologies, the profession is enjoying a pace of increasing knowledge it has not seen before. We will cover some of the highlights and some of the most exciting things that impact the everyday dentistry we deliver to our patients.

After this course you will have a better understanding of:

- Materials choices and which materials work best in which situations
- How to determine which cases should not be treated without consideration given to other issues first
- The dramatic power of including your patients in the conversation

Mark Duncan, DDS, received his college and post-graduate studies at the University of Oklahoma, culminating with a D.D.S. degree in 1995. Following Dental School, Dr. Duncan vigorously pursued continuing education to grow past what was taught in dental schools; twice being recognized as the leader in the State for Continuing Education. He completed the surgical and prosthetic sections with the Misch Implant Institute, earning Fellowship with the Institute as well as holding Diplomate status with the International Congress of Oral Implantologists. He has also earned the Fellowship with the AGD in the shortest time period allowed by the Academy. In 2007 Dr. Duncan was invited to join the full time faculty at the Las Vegas Institute and has moved to Vegas where he teaches with the Institute.

TUITION:	Until Oct 15	After Oct 16
Dentists:	\$ 260	\$ 280
Dental Hygienists:	\$ 150	\$ 165
Dental Technicians:	\$ 150	\$ 165
CDAs:	\$ 135	\$ 150

Introduction to Dental Microscopy and Advanced Endodontics: A Two-Day Hands-On Workshop

Dr. Jeffrey M. Coil

LIMITED ENROLMENT

COURSE DESCRIPTION:

A stimulating two-day course combining the most current technological methods for endodontics and the fundamentals of clinical microscopy for dentistry. Participants will focus on clinically relevant information that is needed to provide successful advanced procedures for restorative and endodontic procedures, and use that information as they perform their dentistry with the aid of the dental operating microscope (DOM). Participants will learn the requirements for incorporating the DOM into their daily dental practice and perform psychomotor skills including tooth preparations, endodontic access, instrumentation and obturation, retreatment and endodontic surgery, on extracted teeth. Novel Nickel Titanium rotary files, irrigation devices, and ultrasonic uses in endodontics will be presented.

Upon completion of this course one will be able to:

1. Par focal a Dental Operating Microscope quickly and correctly.
2. Move freely between most or all magnification levels and know which levels of magnification are best for each situation.
3. Effectively and efficiently move throughout the maxillary arch using direct and reflected vision.
4. Effectively and efficiently move throughout the mandibular arch using direct and reflected vision. The achievement of this goal may be more challenging for some participants, but will come with time and experience.
5. Comfortably perform endodontic access preparations in all six sextants of the mouth at 2.1x to 12.8x magnification.
6. Learn ideal ergo-metric procedures with microsurgical instrumentation.
7. Master the ergonomics of working under magnification.
8. Perform endodontic access cavity preparation under magnification.
9. Utilize ultrasonics to refine access cavity preparations, remove canal obstructions, and perform retrocavity preparations.
10. Instrument and obturate single rooted and multirouted tooth under magnification.
11. Perform endodontic retreatment under magnification.
12. Perform endodontic surgical procedures including incision flap reflection, apicoectomy, retrocavity preparation, retrofilling, and suturing under magnification.

This workshop combines lecture and hands-on formats along with a small class size to provide individual, needs-specific mentoring from instructor to participants. You will learn how magnification can increase your diagnostic capability, improve your precision treatment, and enhance predictability. Participants are encouraged to bring challenging or interesting cases for review with instructor and possible sharing with the entire group.

Additionally, participants are encouraged to bring a variety of extracted human teeth with prepared access cavities made to expose canal orifi. These teeth will be used to perform endodontic treatments on.

Jeffrey M. Coil, DMD., M.S.D., Ph.D., F.R.C.D.(C), F.A.D.I., received his undergraduate, dental and doctorate degrees from the University of British Columbia. He practiced general dentistry for 8 years and was a Clinical Instructor in Endodontics and Periodontics, before obtaining his certificate in

Endodontics at the University of Washington in 1993. Dr. Coil is a Diplomate, American Board of Endodontics. He serves as an editorial consultant for the Journal of the Canadian Dental Association and on the Scientific Advisory Board for the Journal of Endodontics. He is a past President of the Canadian Academy of Endodontics, and is a member of the British Columbia Society of Endodontists and the American Association of Endodontists. Dr. Coil is the mentor of the Northwest Endodontic Study Club and Seminar, and is currently the Director of the Graduate Endodontics Program, Department of Oral Biological and Medical Sciences, University of British Columbia, Canada.

TUITION: Rs, 15,000 2 day hands-on course (\$322.00 CDN)

**LOCATION: Maulana Azad Institute of Dental Sciences
MAMC Complex, Bahadur Shah Zafar Marg
New Delhi – 110002.

Aesthetics & Function of Ceramic Restorations

Dr. Chris Wyatt

COURSE DESCRIPTION:

Patients are increasingly demanding “Perfect Smiles” as a result of social pressures for aesthetically pleasing, beautifully formed, well-aligned white teeth. How do we as dentists providing restorations for individual teeth, replacement of missing teeth, and complete mouth rehabilitations satisfy these demands? The use of modern ceramics has opened the opportunity for dentists to design and deliver beautiful restorations, teeth, and enhanced smiles. “Aesthetics & Function” is the key to the success of all dental work including ceramic veneers, crowns, and bridges. This one day course will cover aesthetics concepts, dental materials, occlusion, and longevity of ceramic restorations and complete rehabilitations. An emphasis will be placed upon the clinical use of the new aesthetic restorative materials including zirconium dioxide and lithium disilicate glass ceramics.

Chris Wyatt, BSc, DMD, MSc, FRCD(C), Dip Pros, is a Certified Specialist in Prosthodontics and an Associate Professor and Head of the Division of Prosthodontics and Dental Geriatrics at the University of British Columbia, Faculty of Dentistry. He has published numerous papers in the field of prosthodontics, implant dentistry, dental caries, and geriatrics. In 1998, Dr. Wyatt was the recipient of the Killam Teaching Award and is the 2009 recipient of the W.W. Wood Award for “Excellence in Dental Education.” Dr. Wyatt is past President of the Association of Prosthodontists of Canada and the BC Society of Prosthodontists, and an associate member of the Pacific Coast Society for Prosthodontics. He is an active member of the Canadian Dental Association, British Columbia Dental Association, and the College of Dental Surgeons of British Columbia. In addition to lecturing and providing continuing education courses on Prosthodontics within and outside of Canada, he enjoys treating patients with prosthodontic concerns in his private practice.

TUITION: Rs, 6,000 (\$128.00 CDN)

DE 9351

Host Modulation Therapy (HMT) in the Treatment of Periodontitis and the Systemic Benefits!

Dr. Lorne Golub

COURSE DESCRIPTION:

Dr. Lorne Golub, will discuss the studies demonstrating that sub-antimicrobial-dose doxycycline (SDD, Periostat, HMT) not only reduces periodontal disease severity but also produces beneficial medical effects in diseases such as rheumatoid arthritis, diabetes, chronic inflammatory skin disease, and others. In addition, a related but still-experimental chemically-modified (non-antibiotic) tetracycline developed in his lab (CMT-3), has shown evidence of efficacy in patients with a type of cancer, Kaposi's sarcoma. He will conclude his presentation by describing the most recent clinical application of the drug he developed (SDD) which was recently highlighted as the COVER STORY in the March 2011 issue of JADA. In this publication, he and his colleagues describe their major NIH-funded double-blind placebo-controlled study on HMT in postmenopausal women – A two-year regimen of SDD (Periostat) resulted not only in significant improvement in periodontal disease but also improved diagnostic biomarkers of both skeletal bone loss and cardiovascular disease in these women.

Lorne Golub, DMD, MSc, S.U.N.Y., distinguished professor of oral biology and pathology, and former interim dean for Stony Brook University's School of Dental Medicine, received the D.M.D. degree (1963) and an M.Sc. in oral biology/biochemistry (1965) from the University of Manitoba, Winnipeg, Canada. He completed his specialty training in periodontics at the Harvard School of Dental Medicine (HSDM) and his postdoctoral fellowship in periodontal and orthopaedic research at the HSDM and Massachusetts General Hospital (Harvard Medical School) in 1968. He was an associate professor at the University of Manitoba until 1973 and moved to the Stony Brook University School of Dental Medicine, where he has served as associate dean for research (1992 to 2002) and interim dean (2008 to 2009). In 2003, he was promoted to the rank of S.U.N.Y. distinguished professor. Dr. Golub has supervised the training of a number of Ph.D. students in oral biology, has received research grants from the NIH (NIDCR, NHLBI) for the past 35 years, including a 10-year MERIT award, additional grants from the Medical Research Council of Canada as well as from industry and private foundations. He has been awarded more than 30 U.S. and international patents; and has published more than 270 peer-reviewed scientific articles in various dental, medical, and biochemical journals. He has received many honors and awards including: the annual International Association Dental Research Distinguished Scientist Award in Oral Biology; an honorary M.D. degree from the University of Helsinki, Finland which is only awarded every 25 years; the annual Norton M. Ross clinical research award from the American Dental Association; the S.U.N.Y. Outstanding Inventor Award; and was awarded the Gold Medal for excellence in research from the American Dental Association, an award made only once every three years. Most recently, he was invited to serve as Guest Editor of two special issues of the journal *Pharmacological Research*, dedicated to the clinical applications of his research on the non-antimicrobial formulations/compositions of tetracyclines. His research career and discoveries were highlighted in the spring 2011 issue of the Harvard Dental Bulletin.

TUITION:	until Oct 21	After Oct 22
Dentists:	\$ 150	\$ 175
Dental Hygienists:	\$ 95	\$ 105
Dental Technicians:	\$ 95	\$ 105
CDAs:	\$ 80	\$ 90

Light Refreshments will be served.

DE 9344

Dental Pharmacology – Better Medicine, Better Dentistry

Dr. Mark Donaldson

COURSE DESCRIPTION:

Did you know that more than 20% of hospital admissions are due to adverse drug reactions? Dentists prescribe less than 10% of available drugs, yet dental patients are often taking prescription medications, herbal products, over-the-counter drugs, or supplements. Since polypharmacy is the norm, especially in the over 65-year old population, this course is essential to every practice setting today.

This informative and entertaining day will provide dentist and allied personnel with the tools to navigate this ever-changing field and keep their patients safe.

COURSE OBJECTIVES – As a result of attending this course, the participant should be able to:

- Discuss the principles of pharmacokinetics, pharmacodynamics and pharmacogenomics.
- Match the right drug at the right dose to the right patient and the right procedure.
- Avoid or manage potential drug interactions.
- Know how to utilize reputable databases and references to evaluate drug therapies and interactions.
- Understand why some drugs work and some don't for postoperative dental pain.
- Achieve optimal patient care through appropriate antibiotic prescribing practices.
- Understand the medications used for safe and effective minimal sedation using oral and inhalational techniques.

Mark Donaldson, BSP, PHARM D, FASHP, FACHE, received his BSc(Pharm) from the University of British Columbia and Doctorate in Clinical Pharmacy from the UW. He is the Director of Pharmaceutical Services at Kalispell Regional Medical Center, Clinical Professor in the Department of Pharmacy at the University of Montana, and Clinical Associate Professor in the School of Dentistry at OHSU.

Dr. Donaldson has a special interest in dental pharmacology and has lectured internationally on a number of related topics for both dental and medical practitioners. He has been a primary author and investigator for the National Institutes of Health (N.I.H.) Consensus Development Committee to define the guidelines for enteral sedation in the United States, as well as an invited expert to compose a whitepaper on Enteral Conscious Sedation for the Academy of General Dentistry (A.G.D.). Currently, he is on the Editorial Board for the Journal of the American Dental Association (J.A.D.A.). Dr. Donaldson has a number of published works in the peer-reviewed literature, and has spent three years in Japan focusing on cross-cultural communication and internationalization.

TUITION:	until Nov 4	After Nov 4
Dentists:	\$ 260	\$ 280
Dental Hygienists:	\$ 150	\$ 165
Dental Technicians:	\$ 150	\$ 165
CDAs:	\$ 135	\$ 150

Continental breakfast and luncheon included.

TIMES: **Registration:** **8:30 am**
Course commences: **9:00 am**

LOCATION: **Lecture Hall #6, Instructional Resources Centre (IRC),
University of British Columbia**

6 hours of instruction

Saturday December 3, 2011**DE 9305****Advanced Local Anaesthesia – A Hands-On Course**

Dr. David Isen

LIMITED ENROLMENT**COURSE DESCRIPTION:**

Over the past century, local anaesthesia and their delivery systems have evolved and improved significantly. Despite these advances however, our ability to anaesthetize our patients is not 100%. In the mandible, the failure rate for the inferior alveolar nerve block is around 20%. Periodontal and periapical infections are also factors in minimizing the success for profound anaesthesia. These situations can create unpleasant dental visits for our patients, and create anxiety for both the patient and the operator. Missed appointments due to a patient's anxiety, or having to rebook appointments due to incomplete anaesthesia, are not only costly to the office, but highly traumatic for the patient. This hands-on course will explore the reasons and remedies for incomplete local anaesthesia, and the anatomical and pharmacological reasons for failed anaesthesia. Techniques beyond the standard inferior alveolar nerve block and standard needle and syringe, will be thoroughly evaluated, both didactically and clinically. Many new devices and techniques present interesting advantages over standard delivery methods.

COURSE TOPICS:

1. The anatomy and pharmacology of incomplete anaesthesia
2. Is articaine a better local anaesthetic?
3. Remedies for incomplete anaesthesia
4. How to give less painful injections – even in the palate
5. A review of the inferior alveolar nerve block
6. The Vazirani - Akinosi Block
7. The Gow Gates Mandibular Block
8. The Maxillary Nerve Block and AMSA Nerve Block
9. Intraosseous and PDL injections
10. Computer Controlled Injections
11. New Products and Devices

Participants are required to bring a syringe, mouth mirror and a perio probe.

David Isen, BSc, DDS, FADI, graduated from The University of Western Ontario. He currently has a private practice in Toronto, treating patients with special needs, requiring intravenous sedation or advanced techniques in local anaesthesia. Many of these people are either medically compromised, dental phobic or have extreme gag reflexes. Dr. Isen is Past President of the Ontario Dental Society of Anaesthesiology, and is a Fellow of The Academy of Dentistry International. He has numerous publications and has acted as a consultant for many groups, including professional sports teams and pharmaceutical companies. He lectures extensively on local anaesthesia, nitrous oxide and oxygen sedation, medical emergencies and basic cardiac life support across North America and internationally.

TUITION:**Until Nov 5****After Nov 6**

Dentists: \$ 395 \$ 435

Dental Hygienists: \$ 395 \$ 435

DE 9349

Lasers in Dentistry – Seeing the Light!

Dr. Glenn A. van As

COURSE DESCRIPTION:

Lasers have been utilized in medicine for many years, but their integration into the field of dentistry has been slower to take hold. Come and see why lasers have become an application that has found its purpose as an adjunctive part of many disciplines within the profession. Whether you are just entertaining the thought of integrating your first laser into your practice, or are an experienced user looking to learn new techniques and clinical tips – this full day lecture will enlighten you as to how lasers can make your clinical dentistry easier, faster and more enjoyable. Between advances in materials and technologies, the profession is enjoying a pace of increasing knowledge it has not seen before. We will cover some of the highlights and some of the most exciting things that impact the everyday dentistry we deliver to our patients.

As a result of attending this course, the participant should be able to:

1. Understand the basics of laser physics and science and how they determine clinical differences between different dental wavelengths.
2. Recognize the 5 different types of laser wavelengths, how they are unique and what the advantages and disadvantages are of these wavelengths.
3. Comprehend clinical situations where a laser may make everyday dentistry simpler or faster including: regular restorative dentistry, cosmetics, implant dentistry, prosthodontics, periodontics and in the treatment of oral lesions.
4. Utilize their present laser more effectively both in terms of settings and in terms of clinical techniques.

Glenn A. van As, DMD, graduated from the Faculty of Dentistry at the University of British Columbia in 1987. Since that time, Glenn has built a High tech – High touch dental practice where the entire dental team is committed to using the latest technologies available to provide the highest level of clinical excellence in dentistry. In addition to being in full time private practice, Dr. van As has served as an assistant clinical professor at U.B.C. from 1989–1999. His areas of interest and expertise involve the utilization of the Dental Operating Microscope for all of his clinical dentistry and in the use of multiple wavelengths of hard and soft tissue lasers for many procedures in his private general practice. Since 1999, Glenn has lectured over 200 times internationally, provided hands-on workshops, and published internationally on the value of both multiple wavelengths of lasers and practicing with the high magnifications obtainable with the dental operating microscope.

TUITION:	Until Nov 24	After Nov 25

THURSDAY EVENING LECTURE SERIES FOR DENTAL HYGIENISTS

Thursday Evening, September 29

Dental Hygiene – The Essentials for Practice Success

Ms. Debbie Preissl & Ms. Paddy Briggs

When your practice is destined for greatness it shows in everything you do from: efficient systems; effective scheduling, implementing important policies/procedures and patient education. It is especially conveyed through the human element – relationship & rapport, providing optimum satisfaction and communicating effectively in today's language.

In this dynamic program designed for hygienists, you will discover the variety of roles, contributions and significant value hygiene provides patients & practices. Learn what it takes to create and maintain these great results through a simple, clear concept and consistency that improves and enhances practice performance.

- Life cycles of practice – identifying your stage, confronting reality & setting goals
- Instilling a standard of integrity with passion – Practice Vision & Mission
- “Can do attitude” – achieving objectives
- Seeking the best approach – people centered versus people skills
- Contemporary effective communication & language skills
- The important connection between oral health and overall health
- The power of knowledge regarding dental procedures & technology
- Outstanding dental treatment- educating patients beyond barriers
- Creating a positive work environment – office culture & leadership
- Prioritizing customer service & referral generation
- Informed consent

Paddy Briggs is a highly skilled dental practice management consultant & presenter with excellent communication and interpersonal skills. Paddy has developed curriculum and teaches in several BC University College dental administration programs. She continues to work with dentists in an advisory capacity helping their practices achieve their full potential. Paddy's warm humorous style of communicating promises a rewarding presentation.

Debbie Preissl is a motivational practice management consultant and speaker who designs customized educational programs for the dental profession. Her valuable communication skills combined with her experience & expertise have assisted dentists all over Canada in implementing effective management systems, establishing goals, and developing effective action plans. Debbie lectures extensively and her presentations are known to energize and inspire her audiences.

Thursday Evening, October 13th

Dental Desensitizing from A-Z for Special Needs Children Without the GA

Ms. Kayla Ragosin-Miller

Children diagnosed with developmental disabilities (i.e., Autism, Fetal Alcohol syndrome, Down Syndrome, Epilepsy, Dysfunction of Sensory Integration) are some of the most challenging for families and practitioners to manage. Often, behavioral issues follow children with these diagnoses, as they don't respond well to traditional discipline due to issues with cognitive delay and lack of speech. This creates a great barrier for dental practitioners to treat these children, therefore deeming dental care one of the greatest unmet healthcare needs for this special needs group.

THURSDAY EVENING LECTURE SERIES FOR DENTAL HYGIENISTS

Through an interactive presentation using activities, video case studies and discussion participants will better understand the complexity of individuals with developmental delays. Protocol on how to approach these cases will be established to obtain dental results with the intention to eliminate the use of general anesthetic for routine procedures.

Following the presentation participants will be able to:

- Define Autism and other related developmental disabilities
- Apply strategies that can be used in the dental chair to gain compliance
- Describe various types of sensory dysfunction that presents with Autism
- Employ a powerful positive reward system in the office

Kayla Ragosin-Miller, RDH, is a graduate from the University of Manitoba. She works in private practice, is a part time instructor and is a hygienist at BC Children's Hospital. Through her studies in the field of Autism Intervention and behavior modification Kayla has developed the dental desensitizing program for children with special needs at BC Children's Hospital. She has been delivering workshops on how compliance for routine dental procedures can be achieved for children with developmental delays. Currently she is involved with a research study that is proving the effectiveness of the dental intervention program using best practice methods.

Thursday Evening, November 3rd

Oral Cancer: Why haven't the clinical outcomes improved?

Dr. Charles Shuler

Oral Cancer remains one of the most common forms of cancer. In India oral cancer has the highest incidence of any type of cancer in males. In North American oral cancer is the sixth most common type of cancer. The incidence of oral cancer has remained relatively constant for the past 40 years and the 5 year survival rates have not improved. During that same 40 year period many other types of cancer have had a decrease in incidence rates and noticeable improvements in long term prognosis. Since oral cancer develops in an anatomic location readily accessible to observation and diagnosis the lack of improvement in oral cancer outcomes represents a paradox in the current climate of improvements in overall health care. In this presentation the process of oral carcinogenesis will be discussed and correlated with the clinical features that may be recognized during an intraoral examination. The sequential stages of oral cancer development will be linked to the grading and staging of the tumor, which are directly linked to long term prognosis. New adjuncts to assist in the diagnosis of oral cancer will be reviewed with respect to their sensitivity and specificity and application in the diagnostic process. Treatment goals and approaches for oral cancer will be reviewed and correlated with the observed prognosis for these tumors. New information related to the molecular events that contribute to the etiology of oral cancer will be reviewed and discussed with respect to new treatment methodologies. The role of the dentist in early detection and appropriate referral of patients with potential oral cancer lesions will continue to be the first line of defense and a play a primary role to improve cancer prognosis.

LEARNING OBJECTIVES

1. To recognize the intraoral changes most commonly associated with oral cancer.
2. To determine the appropriate steps used in an oral, head and neck examination to detect a lesion that may represent oral cancer.
3. To understand the types of changes that occur in an oral cancer over time and how these related to long-term prognosis.

THURSDAY EVENING LECTURE SERIES FOR DENTAL HYGIENISTS CONTINUED

4. To appreciate the use of new methodologies developed to assist in the diagnosis of oral cancer.
5. To correlate oral cancer treatment approaches with the biology of the oral cancer tumor.
6. To learn about advances in molecular biology that will lead to new approaches to the treatment of oral cancer.

Charles F. Shuler, D.M.D., Ph.D., is the Dean of the Faculty of Dentistry of the University of British Columbia. Prior to UBC he was a faculty member at the University of Southern California for 18 years. At USC he served as the Director of the University of Southern California Center for Craniofacial Molecular Biology holding an endowed chair position as the George and Mary Lou Boone Professor of Craniofacial Molecular Biology. He also served as the Director of the Graduate Program in Craniofacial Biology and the Associate Dean for Student and Academic Affairs at the USC School of Dentistry. Dr. Shuler received his B.S. in Biochemistry from the University of Wisconsin, his D.M.D. from Harvard School of Dental Medicine, his Ph.D. in Pathology from the University of Chicago and his Oral Pathology specialty education at the University of Minnesota and the Royal Dental College Copenhagen Denmark. His current research interests include craniofacial development, oral carcinogenesis and gene therapy.

Thursday Evening, December 8th

Elder Care in Dentistry

Dr. Michael MacEntee

This short course will cover the clinical essentials of managing the needs of a frail elderly population. Emphasis will be placed on the possibilities of dentists and dental hygienists on interprofessional teams, and on the difficulties of managing caries, oral hygiene, and oral function in the environment of long-term care facilities.

Michael I. MacEntee, PhD, LDS(I), Dip. Prosth., FRCD(C), is a Professor of Prosthodontics and Dental Geriatrics, Faculty of Dentistry at the University of British Columbia. He has been involved for most of his academic career with the oral health needs of elders - as a prosthodontist, a teacher, and a researcher. He established the ELDERS (Elders' Link with Dental Education, Research and Service) Group with colleagues at UBC to provide administrative structure to the service needs of our ageing population and to the educational needs of dentists and dental students within an overall context of research. His research addresses oral health and quality of life in old age, with a particular focus on frailty and the psychosocial impact of oral prostheses. He has published several books, numerous book chapters and many papers on the measurement, distribution, impact and management of oral disorders. He is a past-president of the Royal College of Dentists of Canada, the Association of Prosthodontists of Canada, and the International College of Prosthodontists. Recently, he is the senior editor of the text "Oral healthcare and the frail elder. Ames, IA: Wiley-Blackwell.

CLINICAL TOPICS IN DENTISTRY PROGRAM

35 topics available – 28 available on DVD!

Great Savings when you purchase 3 or more!

Clinical Topics in Dentistry is a series of educational programs designed to enable dental professionals to learn independently. The Clinical Topics have been recorded from live procedures performed at the midwinter meetings of the Chicago Dental Society and the Hinman Dental Society.

These videos are available for purchase. Each program includes one study guide and one post-test. Once you have placed an order, your clinical videos will be mailed to you so that you may begin working on them at your own pace. As you complete each program, send the original post-test to Continuing Dental Education. Your credits will be forwarded to your licensing body at the end of each month, if applicable. Your post-tests will be marked and a certificate of completion will be sent to you. Extra study guides are available for additional participants, only if purchased at the time of the initial order.

To receive a copy of our catalogue, please call Continuing Dental Education at 604.822.2627, or e-mail us at cde@interchange.ubc.ca. For more information on our video program please visit our website at www.dentistry.ubc.ca/cde and click on "Clinical Videos".

DIRECTIONS TO INSTRUCTIONAL RESOURCES CENTRE, J.B. MACDONALD BLDG, AND THE NOBEL BIOCARE ORAL HEALTH CENTRE ON THE UBC CAMPUS

Driving from Vancouver International Airport

From the airport, follow the signs to Vancouver. Look for SW Marine Drive exit on the north side of the Arthur Laing Bridge. Turn left on West 70th Avenue. West 70th Avenue becomes SW Marine Drive. Follow S.W. Marine Drive for approximately 15 km (10 miles). From SW Marine Dr, turn right onto West 16th Avenue. Follow West 16th Avenue for about two blocks and turn left onto Wesbrook Mall. Continue along Wesbrook Mall until you reach Gate 11. Turn left at Gate 11 onto Thunderbird Boulevard. Turn right onto Health Sciences Mall. Continue for two blocks and turn left at 3-way stop. The Parkade is on your immediate right. The Instructional Resources Centre (Woodward/IRC) Building is immediately east of the Parkade. The J.B. MacDonald Building and the Nobel Biocare Oral Health Centre are just east of the IRC Building.

Driving from Seattle:

Take Highway 99 into Vancouver (Hwy 99 becomes Oak Street) and turn left onto 41st Avenue, which merges into Southwest Marine Drive (approximately 10 km (6 miles)). Stay on Southwest Marine Drive until West 16th Avenue and turn right. Follow West 16th Avenue for about two blocks and turn left onto Wesbrook Mall. Continue along Wesbrook Mall until you reach Gate 11. Turn left at Gate 11 onto Thunderbird Boulevard. Turn right onto Health Sciences Mall. Continue for two blocks and turn left at 3-way stop. The Parkade is on your immediate right. The Instructional Resources Centre (Woodward/IRC) Building is immediately east of the Parkade. The J.B. MacDonald Building and the Nobel Biocare Oral Health Centre are just east of the IRC Building.

Driving from Downtown:

Take either Granville or Burrard Streets, and turn right (west) on to 4th Avenue. Follow 4th Avenue westbound for approximately 5km (3 miles), until it turns into Chancellor Boulevard. Turn left onto Wesbrook Mall and continue along Wesbrook until you reach Gate 11 (second set of lights). Turn right at Gate 11 onto Thunderbird Boulevard. Turn right onto Health Sciences Mall. Continue for two blocks and turn left at 3-way stop. The Parkade is on your immediate right. The Instructional Resources Centre (Woodward/IRC) Building is immediately east of the Parkade. The J.B. MacDonald Building and the Nobel Biocare Oral Health Centre are just east of the IRC Building.

Due to construction on campus, these directions may change slightly – please watch for signs. We apologize for any inconvenience.
